

HEART FAILURE IN FOCUS: SIMPLIFYING DETECTION WITH CARDIO-HART

HEART FAILURE: A GLOBAL CHALLENGE

Heart failure affects around **64 million** people globally, with many cases remaining undiagnosed. Early detection is key to better outcomes.

**Combines
ECG, PCG, and MCG
for early detection.**

**90% Fewer
Echocardiograms**

Cardio-HART significantly reduces the need for unnecessary echocardiograms, optimizing diagnostic efficiency and saving time and resources for both doctors and patients.

EMPOWERING CONFIDENT DIAGNOSES

Equip general practitioners and cardiologists with the tools and confidence to detect heart failure early and accurately, improving patient outcomes and streamlining care pathways.
